Commodity Highlight

Prices stabilize as the festive season phases out and most of the commodities whose prices had increased have seen their prices go back to normal. This season has been mainly characterized by the harvests of major commodities and their prices have also followed a downward trend with in the same time the leading of them being Matooke has had its prices reduce in the markets of Mbarara, Masaka, Kalerwe, Iira, Nakasero and Nakawa among others and this is expected to even reduce further since it's a hot season and Matooke is highly perishable so in most cases farmers have sold it at a giveaway price in the interest of disposing it off.

The price of yellow beans was seen to hike in Gulu market where by the prices increased by shs.30 and shs.50 for wholesale and retail respectively and most of the traders are blaming this on the high demand by the consumers and as schools are preparing to open most of them are buying in large quantities for stocking in the respective learning institutions.

Matooke (bunch, kilogram)

Matooke prices continue to reduce drastically as compared to the previous months; it was noticed that during the Christmas period the prices didn't escalate as compared to the other commodities that are usually consumed at such times. This was mainly because of the ongoing season for Matooke the major production areas increased supply in the markets which led to reduced price since the supply was high. The western and central regions registered the lowest prices for the commodity and this was mainly because they harbor the major production districts of Mbarara, Masaka, Ibanda, and Isingiro among others.

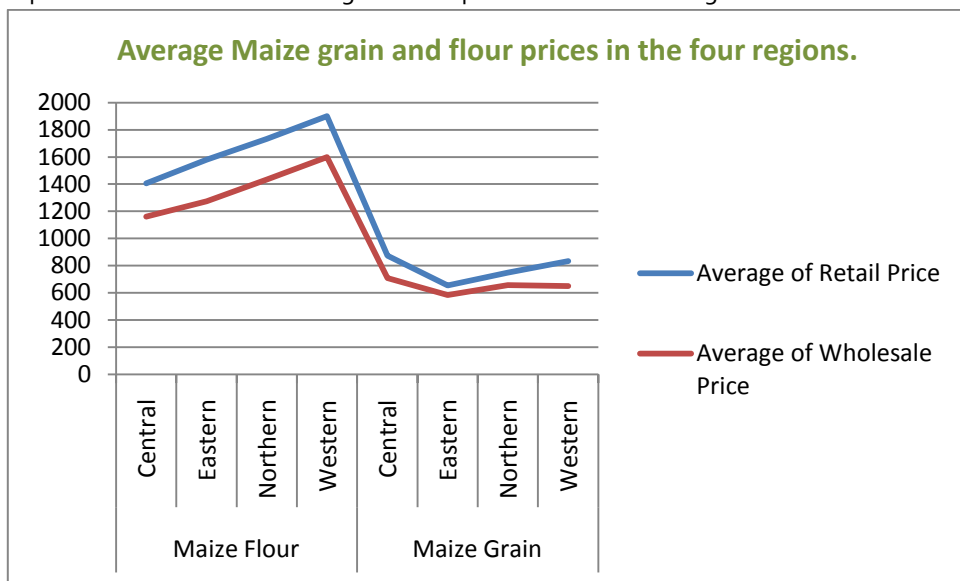

The price of Matooke has mainly dropped down due to the large supply yet the demand is static and this has also led to negative effect on the commodities that act as substitutes of Matooke, their prices have also lowered down since the consumers can opt for Matooke in case they are expensive and these include the white fleshed sweet potatoes, orange fleshed sweet potatoes and irish potatoes among other commodities.

Maize grain and Flour

Plenty of maize grain is realized in the markets of Busia, Kisoro, Masaka and Mbale since the harvest season has just set in there are few customers in the market and therefore there is increased supply with low demand thus the reduced prices. This has had an adverse effect on the price of maize flour. Contrary to the prices of maize grain in Mbale where there is a gradual increase in this market since

traders from Kenya are interested in buying the grain in bulk at all the corners of Mbale market hence indicating increased demand thus the rise in the prices.

The prices are expected to rise further since the learning institutions are about to open and maize flour which is being bought in large quantities all over the country has started sky rocketing and it is even expected to go higher as the month of February nears as it is expected to be the month of high consumption in most of the regions.

The above graph shows the variations within the different regions as noticed, the average for the maize grain is shs.600 while the maize flour is shs.1400.

Irish potatoes

The price of Irish potatoes increased in Kisoro and Mbale since the harvests had reduced and there was high demand from the consumers around this time in the markets in preparation for the big days. Transporters who take to the markets were interested in large amounts and this irked its prices to increase. Though this was not the case by 1st January 2012 since the demand had lowered down and therefore the prices gradually lowered down with the reduced demand.
